

# READING PASSAGE

On returning to his sitting-room, John pulled the large wicker chair in front of the fire, and sat there looking at the glowing coals. The night promised to be very cold, and the wind whistled down the chimney, increasing the comfortable sensation of the clear fire. He sat watching the ruddy reflection of the firelight dancing on the panelled wall, when he noticed that a picture placed where the end of the bookcase  
5 formerly stood was not truly hung, and needed adjustment. A picture hung askew that was particularly offensive to his eyes, and he got up at once to alter it. He remembered as he went up to it that it was at this precise spot four months ago that he had lost sight of the man's figure which he saw rise from the same wicker chair he  
10 had just been sitting on, and at this memory he felt an involuntary shudder.

He put one hand behind the picture to steady it, and as he did so his finger struck a very slight projection in the wall. He pulled the picture a little to one side, and saw that what he had touched was the back of a small hinge sunk in the wall, and almost obliterated with many coats of paint. His curiosity was excited, and he  
15 took a candle from the table and examined the wall carefully. Inspection soon showed him another hinge a little further up, and by degrees he perceived that one of the panels had been made at some time in the past to open, and serve probably as the door of a cupboard. At this point a feverish anxiety to re-open this cupboard door took possession of him, and an intense excitement filled his mind. It was an  
20 excitement that we experience on the event of a discovery which we fancy may produce important results. He loosened the paint in the cracks with a penknife, and attempted to press open the door; but his instrument was not adequate to such a purpose, and all his efforts remained ineffective. His excitement had now reached an overmastering pitch; for he anticipated, though he knew not why, some strange  
25 discovery to be made in this sealed cupboard. He looked round the room for some weapon with which to force the door, and at length with his penknife cut away sufficient wood at the joint to enable him to insert the end of the poker in the hole. The clock in the New College Tower struck one at the exact moment when with a sharp effort he thus forced open the door. It appeared never to have had a fastening,  
30 but merely to have been stuck fast by the accumulation of paint. As he bent it slowly back upon the rusted hinges his heart beat so fast that he could scarcely catch his breath, though he was conscious all the while of a ludicrous aspect of his position, knowing that it was most probable that the cavity within would be found empty.

The cupboard was small but very deep, and in the obscure light seemed at  
35 first to contain nothing except a small heap of dust and cobwebs. His sense of disappointment was keen as he thrust his hand into it, but changed again in a moment to breathless interest on feeling something solid in what he had imagined to be only an accumulation of mould and dirt. He snatched up a candle, and holding this in one hand, with the other pulled out an object from the cupboard and put it on the

40 table, covered as it was with the curious drapery of black and clinging cobwebs which I  
have seen adhering to bottles of old wine. It lay there between the dish of fruit and  
the decanter, veiled indeed with thick dust as with a mantle, but revealing beneath it  
the shape and contour of a violin.

John was excited at his discovery, and felt his thoughts confused. Yet at the  
45 same time he was half amused at his own excitement, feeling that it was childish to  
be moved over an event so simple as the finding of a violin in an old cupboard. He  
soon collected himself and took up the instrument, using great care, as he feared lest  
age should have rendered the wood brittle or rotten. With some vigorous puffs of  
breath and a little dusting with a handkerchief he removed the heavy outer coating  
50 of cobwebs, and began to see more clearly the delicate curves of the body and of the  
scroll. A few minutes more gentle handling left the instrument sufficiently clean to  
enable him to appreciate its chief points. Its seclusion from the outer world, which  
the heavy accumulation of dust proved to have been for many years, did not seem to  
have damaged it in the least; and the fact of a chimney-flue passing through the wall  
55 at no great distance had no doubt conduced to maintain the air in the cupboard at an  
equable temperature. So far as he was able to judge, the wood was as sound as  
when it left the maker's hands; but the strings were of course broken, and curled up  
in little tangled knots. The body was of a light-red colour, with a varnish of peculiar  
lustre and softness. The neck seemed rather longer than ordinary, and the scroll was  
60 remarkably bold and free.

The violin which John was in the habit of using was a good make –a *Pressenda*,  
given to him on his fifteenth birthday by Mr. Thoresby, his guardian. It was of that  
maker's later and best period, and a copy of the Stradivarius model. John took this  
from its case and laid it side by side with his new discovery, meaning to compare  
65 them for size and form. He perceived at once that while the model of both was  
identical, the superiority of the older violin in every detail was so marked as to  
convince him that it was undoubtedly an instrument of exceptional value. The  
extreme beauty of its varnish impressed him vividly, and though he had never seen a  
genuine Stradivarius, he felt a conviction gradually gaining on him that he stood in  
70 the presence of a masterpiece of that great maker. On looking into the interior he  
found that surprisingly little dust had penetrated into it, and by blowing through the  
sound-holes he soon cleared it sufficiently to enable him to discern a label. He put  
the candle close to him, and held the violin up so that a little patch of light fell  
through the sound-hole on to the label. His heart leapt with a violent pulsation as he  
75 read the characters, "*Antonius Stradiuarius Cremonensis faciebat, 1704.*" Under  
ordinary circumstances it would naturally be concluded that such a label was a  
forgery, but the conditions were entirely altered in the case of a violin found in a  
forgotten cupboard, with proof so evident of its having remained there for a very  
long period.
